SUMMARY

Senior Full Stack Developer with 8 years of experience building scalable web applications with a strong focus on ReactJS, TypeScript, JavaScript, Next.js, Node.js and the MERN/MEAN ecosystem. Experienced in full stack system architecture (monolithic and microservices), reusable components, PWAs, responsive UI, and REST/GraphQL APIs. Strong hands-on experience with MongoDB, all major SQL databases, Redux, Angular and cloud-based application delivery across Azure and AWS.

SKILLS

Languages:	TypeScript, JavaScript, HTML5, CSS3, Python, Java
Frameworks & Libraries:	ReactJS, Next.js, Redux, Angular (NgRx, RxJS, Material), Node.js, Express.js, NestJS, Socket.io, OJET, Vue.js, Bootstrap, NPM
Databases & ORMs:	MongoDB, Mongoose, Firebase, PostgreSQL, Prisma, MySQL, SQL Server, Sequelize, Redis, GraphQL, TypeORM
Cloud, CI/CD & DevOps:	Azure, AWS, Docker, Render, Jenkins, Git, Bitbucket
API & Testing:	REST, GraphQL, Postman, Swagger, JIRA, Jest
AI/LLM Technologies:	Gen AI/LLM, Agentic AI, OpenRouter, Ollama, OpenAI
Architecture & Design:	Microservices, UI/UX

EXPERIENCE

Senior Software Engineer

Oct 2025 – Apr 2026

Staffing Agency: V2SOFT India Pvt. Ltd. | End Client: Stella Automotive

- Developed a scalable ReactJS and Next.js portal for the automobile domain, creating reusable UI components and smooth navigation to support car manufacturing dealer onboarding.
- Built and integrated Node.js backend services with Azure serverless functions and Service Bus for event-driven workflows.
- Managed the Azure ecosystem by handling the dashboard, configuring Key Vault, setting up environment variables, executing command-line deployments, and monitoring system logs.
- Served as the primary technical POC for clients, leading technical discussions, sprint demos, requirements clarification, and solution walkthroughs.
- Successfully onboarded the client (Stella Automotive) and delivered the first MVP to production, establishing a foundation to drive long-term company revenue.

Software Engineer IC2

Mar 2023 – Sept 2025

Company: Oracle India Pvt. Ltd.

- Engineered micro-frontends using Oracle JET, leading to a 10% measurable performance gain.
- Contributed to the development and maintenance of a large-scale enterprise product (Sales and Planning Application - SPA) targeting millions of customers.
- Resolved critical revenue discrepancies with high business impact by understanding and optimizing SQL queries to fix calculation mismatches between the database and frontend.
- Integrated and consumed Java (ADF) APIs to develop high-impact ROI/TCO calculators and modular business components.
- Participated in Generative AI training, gaining hands-on exposure to LlamaIndex, Python basics, cursor-based prompting, and AI-assisted development, alongside business communication and soft skills training focused on senior-level management roles, all sponsored by Oracle.
- Managed CI/CD pipelines via Jenkins, monitoring system logs and configuring build and deployment steps.
- Reduced internal developer ramp-up time by 30% through comprehensive documentation and code standardization.

Full Stack Developer

Apr 2022 – Feb 2023

Company: Terrals Technologies Pvt Ltd (PhableCare)

- Architected a PWA known as HealthPe (an online medicine ordering platform) using ReactJS (Redux), driving a 20% increase in company revenue.
- Acted as lead engineer (MERN stack), mentoring junior developers, enforcing coding standards, and conducting thorough code reviews to ensure best practices.
- Enhanced the internal Angular admin portal and optimized frontend assets, while developing Node.js CRUD REST APIs to resolve critical sprint bugs and reduce application load times.

Software Developer

Mar 2021 – Mar 2022

Staffing Agency: Careator Technologies | End Client: Brandix Lanka Pvt Ltd (Fortude)

- Acted as the Technical SPOC for Brandix Lanka Pvt Ltd (Fortude), translating requirements to digitize a manual, paper-based garment sales process into a modern web application.
- Built scalable backend services using NestJS, GraphQL, and TypeORM for modular data management.
- Designed microservices utilizing event-driven architecture and Kafka queues to enhance system reliability.
- Provisioned AWS cloud infrastructure by launching AWS EC2 instances and configuring IAM policies.

MEAN Stack Developer

Mar 2020 – Feb 2021

Company: Fork Media Group

- Designed mobile responsive webpages (UI/UX) for large scale digital advertising and media platforms using Bootstrap and latest HTML5, CSS3 features.
- Collaborated with product teams using Figma designs to translate creative UI assets into functional code.
- Built and managed Node.js cron jobs (schedulers) for marketing operations and sending automated email newsletters every Monday, using AWS SES.

Software Developer

May 2018 – Jan 2020

Staffing Agency: Ongraph Technologies | End Client: Rovi91 Innovations (Mall91) / DataDiggers

- Built and scaled the DataDiggers platform (Market Research domain) using the MEAN stack (Angular, Express.js, and MongoDB), supporting over 100,000 active users and contributing to a 17% revenue uplift and 12% churn reduction.
- Integrated Amazon S3 (AWS S3) for storing media files and images, enabling secure asset management within Node.js servers.
- Architected a Progressive Web App (PWA) chatbot from scratch using Vue.js and Socket.io for Mall91 (an e-commerce platform), driving engagement of millions of Tier-2/3/4 users.
- Utilized GCC and Node.js streams to ingest real-time sports event data in Firebase, handled complex, deeply nested datasets and DB queries through extensive asynchronous programming.

INDEPENDENT PROJECTS

Agentic AI Backend Orchestrator (Self-Learning Project)

[GitHub Repository](#) | [Live API Host](#)

- Developed a production-ready Agentic AI backend using Node.js and TypeScript with multi-LLM integration via OpenRouter API and OpenAI.
- Implemented a modular AI orchestration architecture featuring automated tool selection, real-time web-search tools, and response optimization.
- Integrated Redis caching layer to handle conversational memory efficiency and optimized cloud deployment pipelines.

EDUCATION

B.Tech in Computer Science & Engineering (FTE) – DIT University (2014–2018) | CGPA: 7.0

ADDITIONAL DETAILS

Hometown: Prayagraj, Uttar Pradesh

INDEPENDENT PROJECTS (CONTINUED)

Saral Yojana — Voice-First Government Scheme Assistant

GitHub: github.com/utkcoreprogrammer/saral-app

Built a FastAPI civic-tech assistant that simplifies Indian government schemes and explains them in 10 Indian languages with voice-first output.

Integrated Sarvam.ai for multilingual translation and bulbul:v3 text-to-speech, with male/female speaker selection matched to each supported language.

Integrated Anakin.io URL scraping and web search to retrieve current scheme content and source references before generating clear citizen-facing answers.

Added scholarship quick-picks for graduate and postgraduate students, plus in-person appointment booking for offline assistance at the Bengaluru office.

Tech: Python, FastAPI, Pydantic, HTTPX, Sarvam.ai, Anakin.io, HTML, CSS, JavaScript
